Käferschnecken

A detailed illustration of a snail shell, showing its characteristic spiral structure. The shell is colored in shades of reddish-brown and orange, with darker lines indicating the growth lines. It is positioned centrally within a yellow circular frame.

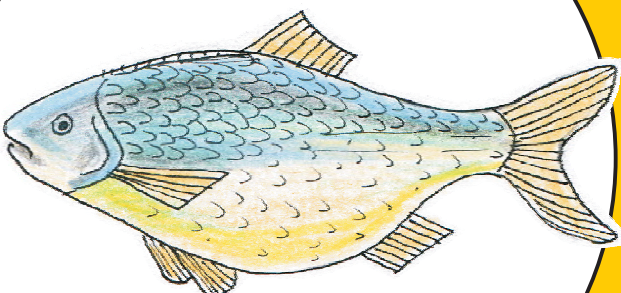

900 Arten

Kahnfüßer

An illustration of a comb-footed mollusk, also known as a caudofoverate. It features a long, slender, greenish body that tapers to a point. At the posterior end, there is a cluster of several long, thin, white tentacles, each ending in a small yellow tip. The organism is shown within a yellow circular frame.

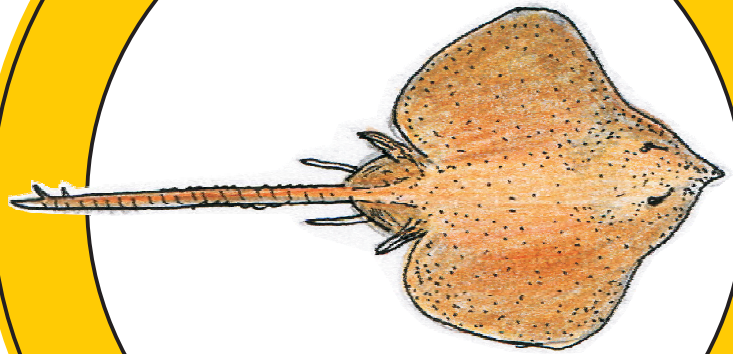

350 Arten

Knochenfische

An illustration of a bony fish, likely a common carp or similar species. The fish is shown in profile, facing left. It has a yellowish body with blue scales, a prominent dorsal fin, and a tail fin. The fish is enclosed within a yellow circular frame.
